COMTREX

COMTREX is proud to announce the addition of a **NEW** Solar line to the existing portfolio.

The solar products are part of **COMTREX's** green initiative to help you capitalize on the power of the sun with no recurring fees and a great reward for generations to come.

Renewable Energy is the trend for the 21st Century.

Now, more than ever we can harness the sunlight and help significantly reduce harmful carbon dioxide emissions.

Solar Energy at work for you

THE USE OF NATURAL RESOURCES WHEN NEEDED

With Global Warming, natural disasters are happening on a regular basis. Every day we hear in the news that areas around the world are devastated by tornados, hurricanes, snow storms, earthquakes, flooding and sadly many more incidents. Power outages can last for days. Portable solar kits, solar chargers, solar lamps or flashlights should be among the first items to include in your emergency kit.

In developing countries and remote areas, generators, gas lamps, candles and emergency lanterns are very often the only source of power. Solar energy is the light that will brighten the future.

TRAFFIC LIGHTS

Solar traffic lights are designed to provide an economical, affordable and environmentally friendly source of energy

Help yourself while saving the planet

STREET POLES

Solar-powered street lights are built to operate under direct sunlight with minimal or no maintenance. Our solar lights are equivalent to a grid-tied electric street light and can be used as a source of energy for major highways, streets and side roads. A fully charged battery can produce electricity without sun exposure for 8 hours a day during 3 to 5 consecutive days. Solar powered street lights are ideal for municipalities who want to reduce their operational costs and promote green solutions. No wiring and no recurring fees. It's also an ideal alternative for remote areas, beach or lake front properties, and national parks with lack or no access to regular power lines.
